AWARDS &

Active reference hi-fi just got serious

Listen with Confidence: add a source, hit the power, and get the performance your music deserves. **Active hi-fi** just had its **biggest upgrade** in over a decade.

It takes the standard Confidence 20's **head-turning looks**, **legendary drivers** and **award-winning sound**, and hides **studio-grade amplifiers** right inside its stands. Under the hood, it uses the same audio-processing tools you'll find in our flagship **Core** professional reference speakers: think full DSP, analogue and digital connectivity, and pro-level room-compensation controls. **Everything you need to hear.**

Pure performance

Confidence 20A is the most elegant way to build the simplest audiophile system

Integrated amps

An active speaker has an amplifier for each individual driver. Confidence 20A uses some of the best in the business. We've teamed up again with our friends at Pascal over in Copenhagen, who have provided reference-quality amplification for our Core professional studio speakers. Here, the Esotar 3 tweeters get a more-than-ample 150W, while the NeoTec mid/bass drivers get a whopping 400W each.

Bass-port

Confidence 20A has seen a leap forward in bass-port design. Yes, a bass-port is just a hole. But this an engineered hole. An Exponentially Shaped Dual Flared one. Confidence 20A's ESDF port has an end-to-end exponential shape that almost totally eliminates noise. It means you get vastly improved bass performance – which, of course, influences everything else up the frequency range. Think more precision to vocals, more clarity to strings and (of course) more weight to the thumps and bumps.

Esotar 3 Tweeter

The Esotar 3 is our flagship high-frequency driver that made its debut in 2018 with the next-gen Confidence launch. It has a 28mm precision-coated soft-dome diaphragm, backed-up by the Hexis resonance-defeating inner dome. In the engine-room is an aluminium voice coil that minimises weight for improved transient response, plus a powerful neodymium magnet system for increased sensitivity and stellar dynamic range. There's also a large damped metal back-chamber for lowering resonant frequencies and improving clarity.

NeoTec Woofer

The 18cm NeoTec woofer unit also has a neodymium-based motor (which incorporates an ingenious venting system for optimised air movement). Its aluminium voice-coil is wedged to a glass-fibre voice-coil former for optimum stiffness, and it's fronted by our signature precision MSP (Magnesium Silicate Polymer) cone.

Confidence 20A

Confidence 20A is the **next generation** of Dynaudio active speakers. **Simplicity and precision...** the hallmarks of any **great audio system.**

Confidence 20A

The Expert Imaging and Sound Association (EISA) recognises Confidence 20A as one of the best active loudspeakers in 2025-2026:

"The Confidence 20A is a high quality, beautifully designed active speaker that delivers sonic performance without the hassle sometimes associated with high-performance audio." EISA 2025/2026

"The Dynaudio Confidence 20A has truly earned every ounce of self-confidence in its name. Many loudspeakers offer refined highs, deep soundstage definition, and brilliant precision. Combining these three qualities with such composure, however, is something only very few tweeters manage. The interaction between the tweeter and mid-woofer is also excellent. The spine-tingling and perfectly controlled bass of the latter left no-one in our listening room dry-eyed. All that's missing to achieve happiness is a player with a volume control." Tim Hundenborn, HIFI.DE

"I can confidently say that the Dynaudio Confidence 20A is the highest-performing loudspeaker system that I've auditioned in my room... anyone considering a high-end active loudspeaker system would be foolish not to audition it. And audiophiles who are convinced of the superiority of conventional amp-plus-speaker systems might reconsider their preferences after hearing the Confidence 20A... not only is the Dynaudio Confidence 20A a true high-end loudspeaker system, it might also be a trendsetter." George de Sa, Soundstage!

"I think the Dynaudio Confidence 20A should also have a great appeal to seasoned audiophiles who are tired of fiddling with cables and yet another new amplifier or DA-converter and long for a 'final system' that offers everything they have been looking for their whole lives, but in a simple and elegant way. All you need to do is add a good source. When you add all that up, I find it exciting but also defensible to call the Confidence 20A indeed the best loudspeaker Dynaudio has ever developed."

Max Delissen, Music Emotion

"The Dynaudio Confidence 20A active speakers aren't cheap – but during our review, they almost made us believe in magic." Michael Lang, Stereo

Snow High Gloss

Space High Gloss

Analogue input	XLR (balanced)
Digital inputs	XLR (AES3)
Digital outputs	XLR (AES3)
Frequency response (+/- 3dB)	34 – 25,000Hz
Frequency response (-6dB dynamic)	30 – 28,000Hz
Box principle	Ported: Exponentially Shaped Dual-Flared port
Crossover	2-way DSP-based
Crossover frequency	2500Hz
Woofer	18cm NeoTec MSP
Tweeter	28mm Esotar 3
Amplifier power	400W + 150W
AC power input	100-240V 50/60Hz
Standby power consumption	< 0.5W
Maximum power consumption	120VAC: 453W / 230VAC: 425W
Weight	28.5kg / 62.8lb
Dimensions (W x H x D)	205.5 x 500 x 396mm 8 x 19.7 x 15.6in
Dimensions with feet/grille (W x H x D)	368 x 1119 x 457mm 14.5 x 44.1 x 18in
Finishes	Space High Gloss, Snow High Gloss
